Activity 4 – Database Users, Roles, Privileges & Access Control

GROUP 05 | EDITABLE PROGRESS DOCUMENTATION

Cover information	Value / editable field
Prepared	6 November 2026
Group	05
Members	Daniel Cueto, Justine Philip Raguin, Aaron Imperial, Jenver Napenas, Emmanuel Manansala
Group repository	https://github.com/grp05-dba/grp05_lostandfound
Activity 4 evidence folder	https://github.com/grp05-dba/grp05_lostandfound/tree/main/group-test-results/activity-4
Class Google Sheets tracker	https://docs.google.com/spreadsheets/d/15msFD5oWM6FzkEOyz3ayJP17TUayv2Qp/edit?gid=542211697#gid=542211697
Submission status	Working DOCX draft; final PDF submission not yet recorded

Evidence basis: This report was refreshed against the Group 05 repository's current main-branch Activity 4 directory on 6 November 2026, using the project Part A–E reports, SQL/script directories, and recorded verification outputs available for Groups 02, 03, 04, 06, 07, 08, 10 and 11. The Activity 4 instruction file supplied as the reference was used to check required coverage and deliverables. This document does not claim that the author independently re-ran database tests or verified tracker entries, feedback delivery, or final submission.

Repository structure check: The reviewed project folders contain Part A (setup/assessment), Part B (access-control planning), Part C/D (implementation and least-privilege review), and Part E (verification) reports. SQL and evidence/verification assets are present in the project folders where listed. Group 02 also includes verification/setup scripts; the documentation summarizes recorded outcomes rather than treating the presence of files as proof of a successful independent rerun.

Executive progress and completion status

Assessment, role planning, SQL privileges and verification evidence are present for eight other-group projects: 02, 03, 04, 06, 07, 08, 10 and 11. It is not established that Step 3 was the only outstanding requirement. Several reports say the tracker was not updated and owner feedback was not delivered. Group 12 is absent from these reviewed evaluation folders. Groups 02 and 03 report unresolved cross-database CONNECT failures.

Part F requirement	Status from available records
Step 1 – Own repository	Activity 4 Markdown reports, SQL scripts and output evidence appear in Group 05 repository. The example db-access-control/ structure is not followed consistently; commit history not fully audited.
Step 2 – Tracker	Not verified. Several source reports explicitly say the Activity 4 Log was not edited.
Step 3 – Progress documentation	This editable DOCX is prepared. Final member list, tracker link, evidence review, PDF export and course submission still needed.

1. Projects set up and database objects

All findings below describe separately evaluated local environments. "Success with issues" means setup and tests were recorded but limitations remain; it is not a production-security claim.

Group / project	Source repository	Evaluated DB / objects	Result

02 – Park It	https://github.com/millerdevera6-glitch/park-it-database	grp_parkitdb / public; 5 tables, 5 sequences	Executed tests; unresolved cross-database CONNECT
03 – OJT Management	https://github.com/swvenz/Project-OJT-RMA-System	ojt_managementdb / public; 12 tables, 11 insert sequences	Success with issues; cross-database CONNECT unresolved
04 – BrewPOS	https://github.com/Nycri/brewpos	grp_brewposdb / public; 5 tables, 3 insert sequences	Success with issues
06 – HabalGo	https://github.com/jeanaroyo/HabalGo	grp00_habalgodb / habalgo; 8 tables, 7 SERIAL sequences	Success with issues
07 – CampusSafe	https://github.com/jeffersonorpesa2-ops/grp07-campussafe	grp07_campussafedb / public; 9 tables, 9 SERIAL sequences	Success with issues
08 – Campus Canteen	https://github.com/EclipseChan/bwisIT-Solutions---Campus-Canteen-Pre-Order-and-Queue-Management-System	canteen_g05_activity4 / public; 7 tables, 7 sequences	Success with issues
10 – MESA	https://github.com/kathlenmaecallos11-arch/Restaurant-Online-Ordering-Table-Reservation-System	mesa_g05_activity4 / public; 8 tables, 7 sequences, 4 views	Success with issues
11 – BoardTrack	https://github.com/karlrobertc-art/BoardTrack	boardtrack_g05_activity4 / public; 8 tables, 7 sequences, 1 view	Success with issues

Coverage: Group 05's own system is appropriately excluded. Confirm against the class tracker whether Group 12 is required. Group 02 recorded psql tests, but its Part A file alone does not show a full application startup demonstration.

2. Access-control plans – login accounts and groups

Application-layer identities and PostgreSQL accounts are different. Each table below summarizes the reported login / NOLOGIN group mappings; per-table and sequence permissions appear in the linked project part_b.md and part_cd.md files.

Group 02 – Park It

Login	NOLOGIN group	Application role / responsibility	Privilege scope
park_it_app	park_it_runtime_grp	Shared application service / runtime	CONNECT; schema USAGE; required table SELECT/INSERT/UPDATE/DELETE and permitted sequence use, following project-specific scripts.
park_it_auditor	park_it_readonly_grp	Database auditor / report user	CONNECT; schema USAGE; SELECT on approved objects; no ordinary data writes or sequence use.
park_it_dba	park_it_admin_grp	Project-scoped database maintenance	Project object ownership or scoped maintenance rights; no routine superuser / cluster-wide CREATEDB or CREATEROLE.

Detailed source:
https://github.com/grp05-dba/grp05_lostandfound/tree/main/group-test-results/activity-4/grp02-parkit/part_b.md

Group 03 – OJT Management

Login	NOLOGIN group	Application role / responsibility	Privilege scope
grp03_ojt_app	grp03_ojt_runtime_grp	Shared application service / runtime	CONNECT; schema USAGE; required table SELECT/INSERT/UPDATE/DELETE and permitted sequence use, following project-specific scripts.
grp03_ojt_auditor	grp03_ojt_readonly_grp	Database auditor / report user	CONNECT; schema USAGE; SELECT on approved objects;

			no ordinary data writes or sequence use.
grp03_ojt_dba	grp03_ojt_admin_grp	Project-scoped database maintenance	Project object ownership or scoped maintenance rights; no routine superuser / cluster-wide CREATEDB or CREATEROLE.

Detailed source: https://github.com/grp05-dba/grp05_lostandfound/tree/main/group-test-results/activity-4/grp03-Project-OJT-RMA-System/part_b.md

Group 04 – BrewPOS

Login	NOLOGIN group	Application role / responsibility	Privilege scope
brewpos_app	brewpos_runtime_grp	Shared application service / runtime	CONNECT; schema USAGE; required table SELECT/INSERT/UPDATE/DELETE and permitted sequence use, following project-specific scripts.
brewpos_auditor	brewpos_readonly_grp	Database auditor / report user	CONNECT; schema USAGE; SELECT on approved objects; no ordinary data writes or sequence use.
brewpos_dba	brewpos_owner_grp	Project-scoped database maintenance	Project object ownership or scoped maintenance rights; no routine superuser / cluster-wide CREATEDB or CREATEROLE.

Detailed source: https://github.com/grp05-dba/grp05_lostandfound/tree/main/group-test-results/activity-4/grp04-brewpos/part_b.md

Group 06 – HabalGo

Login	NOLOGIN group	Application role / responsibility	Privilege scope
habalgo_app	habalgo_runtime_grp	Shared application service / runtime	CONNECT; schema USAGE; required table SELECT/INSERT/UPDATE/DELETE and permitted sequence use, following project-specific scripts.
habalgo_auditor	habalgo_readonly_grp	Database auditor / report user	CONNECT; schema USAGE; SELECT on approved objects; no ordinary data writes or sequence use.
habalgo_dba	habalgo_owner_grp	Project-scoped database maintenance	Project object ownership or scoped maintenance rights; no routine superuser / cluster-wide CREATEDB or CREATEROLE.

Detailed source: https://github.com/grp05-dba/grp05_lostandfound/tree/main/group-test-results/activity-4/grp06-habalgo/part_b.md

Group 07 – CampusSafe

Login	NOLOGIN group	Application role / responsibility	Privilege scope
campussafe_app	campussafe_runtime_grp	Shared application service / runtime	CONNECT; schema USAGE; required table SELECT/INSERT/UPDATE/DELETE and permitted sequence

			use, following project-specific scripts.
campussafe_report	campussafe_readonly_grp	Database auditor / report user	CONNECT; schema USAGE; SELECT on approved objects; no ordinary data writes or sequence use.
campussafe_dba	campussafe_owner_grp	Project-scoped database maintenance	Project object ownership or scoped maintenance rights; no routine superuser / cluster-wide CREATEDB or CREATEROLE.

Detailed source:
https://github.com/grp05-dba/grp05_lostandfound/tree/main/group-test-results/activity-4/grp07-campussafe/part_b.md

Group 08 – Campus Canteen

Login	NOLOGIN group	Application role / responsibility	Privilege scope
canteen_app	canteen_runtime_grp	Shared application service / runtime	CONNECT; schema USAGE; required table SELECT/INSERT/UPDATE/DELETE and permitted sequence use, following project-specific scripts.
canteen_report	canteen_readonly_grp	Database auditor / report user	CONNECT; schema USAGE; SELECT on approved objects; no ordinary data writes or sequence use.
canteen_dba	canteen_owner_grp	Project-scoped database maintenance	Project object ownership or scoped maintenance rights; no routine superuser / cluster-wide CREATEDB or CREATEROLE.

Detailed source:
https://github.com/grp05-dba/grp05_lostandfound/tree/main/group-test-results/activity-4/grp08-campus-canteen/part_b.md

Group 10 – MESA

Login	NOLOGIN group	Application role / responsibility	Privilege scope
rors_app	rors_runtime_grp	Shared application service / runtime	CONNECT; schema USAGE; required table SELECT/INSERT/UPDATE/DELETE and permitted sequence use, following project-specific scripts.
rors_report	rors_readonly_grp	Database auditor / report user	CONNECT; schema USAGE; SELECT on approved objects; no ordinary data writes or sequence use.
rors_dba	rors_owner_grp	Project-scoped database maintenance	Project object ownership or scoped maintenance rights; no routine superuser / cluster-wide CREATEDB or CREATEROLE.

Detailed source:
https://github.com/grp05-dba/grp05_lostandfound/tree/main/group-test-results/activity-4/grp10-mesa/part_b.md

Group 11 – BoardTrack

Login	NOLOGIN group	Application role / responsibility	Privilege scope
boardtrack_app	boardtrack_runtime_grp	Shared application service / runtime	CONNECT; schema USAGE; required table

			SELECT/INSERT/UPDATE/DELETE and permitted sequence use, following project-specific scripts.
boardtrack_report	boardtrack_readonly_grp	Database auditor / report user	CONNECT; schema USAGE; SELECT on approved objects; no ordinary data writes or sequence use.
boardtrack_dba	boardtrack_owner_grp	Project-scoped database maintenance	Project object ownership or scoped maintenance rights; no routine superuser / cluster-wide CREATEDB or CREATEROLE.

Detailed source:
https://github.com/grp05-dba/grp05_lostandfound/tree/main/group-test-results/activity-4/grp11-boardtrack/part_b.md

3. SQL scripts, memberships, grants and restrictions

Group roles use NOLOGIN. Reports describe role memberships, database CONNECT, schema USAGE, allowed table/view and sequence operations, ownership and public/default grants. Project-account passwords and secrets are not included here. See source SQL for exact per-object grants rather than treating the following as one universal grant policy.

Project	Implementation summary	Group 05 evidence folder
02 – Park It	Inline role/grant SQL in part_cd.md; no separate sql/ folder confirmed	https://github.com/grp05-dba/grp05_lostandfound/tree/main/group-test-results/activity-4/grp02-parkit
03 – OJT Management	sql/01_roles_database.sql, sql/02_schema.sql, sql/03_privileges.sql and verification scripts	https://github.com/grp05-dba/grp05_lostandfound/tree/main/group-test-results/activity-4/grp03-Project-OJT-RMA-System
04 – BrewPOS	sql/01_roles_database.sql, sql/02_privileges.sql, verification and/or lab-isolation scripts	https://github.com/grp05-dba/grp05_lostandfound/tree/main/group-test-results/activity-4/grp04-brewpos
06 – HabalGo	sql/01_roles_database.sql, sql/02_privileges.sql, verification and/or lab-isolation scripts	https://github.com/grp05-dba/grp05_lostandfound/tree/main/group-test-results/activity-4/grp06-habalgo
07 – CampusSafe	sql/01_roles_database.sql, sql/02_privileges.sql, verification and/or lab-isolation scripts	https://github.com/grp05-dba/grp05_lostandfound/tree/main/group-test-results/activity-4/grp07-campussafe
08 – Campus Canteen	sql/01_roles_database.sql, sql/02_privileges.sql, verification and/or lab-isolation scripts	https://github.com/grp05-dba/grp05_lostandfound/tree/main/group-test-results/activity-4/grp08-campus-canteen
10 – MESA	sql/01_roles_database.sql, sql/02_privileges.sql, verification and/or lab-isolation scripts	https://github.com/grp05-dba/grp05_lostandfound/tree/main/group-test-results/activity-4/grp10-mesa
11 – BoardTrack	sql/01_roles_database.sql, sql/02_privileges.sql, verification and/or lab-isolation scripts	https://github.com/grp05-dba/grp05_lostandfound/tree/main/group-test-results/activity-4/grp11-boardtrack

Important exception: A project-specific REVOKE does not negate PUBLIC CONNECT granted by an unrelated database. Group 02 and 03 observed such failures. Dedicated isolated lab clusters used in other evaluations do not retrospectively fix the shared-cluster permissions.

4. Verification results – expected versus observed

Representative checks are transcribed from the project verification reports; complete statements, expected and actual outputs, and evidence remain in the corresponding GitHub files. “PASS” here means the recorded test met its reported expectation, not that it was independently rerun for this document.

Group / account	Operation	Expected	Actual recorded	Status
02 / park_it_app	INSERT vehicle, generated ID	Allowed	INSERT 0 1; rolled back	PASS
02 / park_it_app	CONNECT unrelated postgres DB	Denied	Connection succeeded	FAIL / unresolved

03 / grp03_ojt_app	Insert with generated IDs	Allowed	13 successful inserts recorded	PASS
03 / grp03_ojt_app	CONNECT unrelated grp_parkitdb	Denied	Connection succeeded	FAIL / unresolved
04 / brewpos_auditor	Unauthorized table writes	Denied	Permission denials recorded	PASS; 58/58 main checks
06 / habalgo_app	Permitted CRUD and sequence usage	Allowed	Real transaction succeeded; rolled back	PASS; 70/70 main checks
07 / campussafe_app	Application report lifecycle	Allowed	Submitted through Closed succeeded	PASS; separate web gaps
08 / canteen_app	Restricted app startup/API workflows	Allowed	Startup and API checks recorded	PASS; see logs
10 / rors_report	INSERT customer	Denied	SQLSTATE 42501	PASS; 84 total checks
11 / boardtrack_report	UPDATE property	Denied	SQLSTATE 42501	PASS; 82 total checks

5. Issues, fixes, and unresolved findings

Project	Unexpected result / issue	Correction / outstanding action
02 – Park It	Unrelated-database PUBLIC CONNECT remained available to project accounts.	Unresolved. Review legitimate users and PUBLIC CONNECT privileges before changing shared-cluster permissions.
03 – OJT Management	OJT archive/schema mismatch and Java compatibility columns; unrelated-database connection succeeds.	Local schema reconciliation documented; cross-project isolation is unresolved.
04 – BrewPOS	An additional line item can be appended to an already completed order.	Reproduced and rolled back; owner should enforce finalized-order lifecycle rules.
06 – HabalGo	Unauthenticated API CRUD and direct-SQL booking/feedback or assignment integrity gaps.	Runtime privileges tested; application authorization and integrity fixes remain with owner.
07 – CampusSafe	Web authorization findings: auditor report creation, unassigned maintenance actions, anonymous attachment access.	Reproduced and documented; no owner-source fix or feedback delivery verified.
08 – Campus Canteen	Service runtime supports multiple application identities; no database RLS per-user restriction.	Trust boundary documented; further DB policy design only if required.
10 – MESA	Upstream hardcoded database name, missing password helper, incomplete upstream progress PDF.	Adapted isolated setup succeeded; upstream documentation shortcomings remain.
11 – BoardTrack	Application bootstrap attempts schema setup without separating migration and runtime credentials.	Used isolated provisioning and AUTO_SETUP=false; no upstream source changes.

6. Feedback to owning groups

Current evidence does not confirm delivery of feedback; several source reports explicitly say that feedback was not sent. The recommendations below are drafts, not records of messages delivered. Update the status and date only after contacting each owning group.

Group	Summary for owning group	Sent? / date (editable)
02	Unrelated-database PUBLIC CONNECT remained available to project accounts. Recommendation: Unresolved. Review legitimate users and PUBLIC CONNECT privileges before changing shared-cluster permissions.	[NOT VERIFIED / DATE: ____]
03	OJT archive/schema mismatch and Java compatibility columns; unrelated-database connection succeeds. Recommendation: Local schema reconciliation documented; cross-project isolation is unresolved.	[NOT VERIFIED / DATE: ____]
04	An additional line item can be appended to an already completed order. Recommendation: Reproduced and rolled	[NOT VERIFIED / DATE: ____]

	back; owner should enforce finalized-order lifecycle rules.	
06	Unauthenticated API CRUD and direct-SQL booking/feedback or assignment integrity gaps. Recommendation: Runtime privileges tested; application authorization and integrity fixes remain with owner.	[NOT VERIFIED / DATE: ____]
07	Web authorization findings: auditor report creation, unassigned maintenance actions, anonymous attachment access. Recommendation: Reproduced and documented; no owner-source fix or feedback delivery verified.	[NOT VERIFIED / DATE: ____]
08	Service runtime supports multiple application identities; no database RLS per-user restriction. Recommendation: Trust boundary documented; further DB policy design only if required.	[NOT VERIFIED / DATE: ____]
10	Upstream hardcoded database name, missing password helper, incomplete upstream progress PDF. Recommendation: Adapted isolated setup succeeded; upstream documentation shortcomings remain.	[NOT VERIFIED / DATE: ____]
11	Application bootstrap attempts schema setup without separating migration and runtime credentials. Recommendation: Used isolated provisioning and AUTO_SETUP=false; no upstream source changes.	[NOT VERIFIED / DATE: ____]

7. AI usage declaration and validation

AI assistance was used to organize and draft the Activity 4 progress documentation from Group 05 repository reports, SQL scripts and local verification outputs. The source files include additional project-specific AI-use notes. Recorded validation methods include independent PostgreSQL login sessions, inspection of effective role privileges and object catalog, SQLSTATE checks for denied operations, allowed operations with rollback, and selected application startup/API checks. Preparation of this Word document did not independently access the running databases or repeat the tests. Human review is still required for membership details, project coverage, tracker URL, feedback delivery, secrets screening, and final submission.

8. Submission checklist and remaining actions

Requirement	Evidence-based status
Reports and plans for eight reviewed groups	Present in Group 05 repository
Scripts and recorded checks	Groups 03–11 have SQL files; Group 02 has inline implementation SQL and recorded psql tests
Cross-project database isolation	Unresolved for Groups 02 and 03
Feedback sent to owners	Not verified / reports say not done
Activity 4 Log in class Google Sheets	Not verified; reports say not updated
All other groups evaluated	Not established; Group 12 absent from reviewed folder
Member names and tracker URL	Insert verified details on cover
Editable progress document	DOCX prepared; export PDF after revisions and submit with repository URL

Submission reminder (per Activity 4 Part F): reconcile the evaluated-project list with the class Google Sheets tracker; update the Activity 4 Log with repository, setup result, access-control link/status, feedback sent/date, PDF link and last-updated date; send and date owner feedback; document unresolved isolation findings; verify cover details and member names; screen the document and screenshots for secrets; export the final progress PDF; and submit it with the repository link. These items remain pending or unverified unless updated with evidence.
